- After the first popping cycle, wait for approximately 10 to 12 minutes before using the Popcorn Maker again.
- Place a small amount of butter in the Measuring Cup during the popping process and allow the butter to melt.
- Never put the butter in the Aluminum Heating Chamber.
- If the butter isn't entirely melted after the duration of popping, leave the unit on for a few more minutes to let the hot air melt the butter.
- **DO NOT** exceed one Measuring Cup of kernels in one cycle as this will overfill the machine.
- **DO NOT** use less than the minimum amount of kernels in one cycle (1/2 Measuring Cup), as this will result in burnt popcorn.
- For best results use fresh kernels, as old kernels may dry out and be unable to pop during a cycle. If your kernels are dry, try adding them to a 12 oz sealable jar with 1 tsp of water, then seal, shake, and let sit overnight.

USING YOUR POPCORN MAKER

6. After a few minutes the Popcorn Maker will start making popcorn. It will continue to operate until all the kernels are popped. The popping cycle will last about 3 minutes.
